

Hill in the distance. (Drawing by Giles Parfitt © Surrey County Archaeological Unit) Hill in the distance. (Drawing by Giles Parfitt © Surrey County Archaeological Unit) The principal roundhouse, with its imposing porch, was identified from postholes, and these also indicated the presence of fencing and other structures, mostly of uncertain form but including the four-poster raised granaries. The site is also notable for the wooden Coopers' kiln just behind the fence shown here. The viewpoint looks approximately west towards the wooded Coopers' fields.

### Peters Sports Field, Egham c. 850 BC

Many Bronze Age monuments have also been known (left) and Frensham (right) Commons about since antiquarian times, whether barrows – often labelled on early maps as 'tumuli' – or field systems. However, aerial photography or more recent advances such as LiDAR (Light Detection and Ranging) have allowed for more features to be detected. Some of these field systems – such as Whitmoor Common – have even had small excavations which have confirmed their dating.

Although it is common to generalise late prehistory – and the Bronze Age in particular – as the period which saw the introduction of metallurgy, other important developments took place, including open settlement and field systems. At the same time, many practices continued from the Late Neolithic which preceded it, making it a complex period with cultural change very gradual over time.

### The Bronze Age Period c. 2500 - 800 BC

#### Where can I discover more?

Although one of the most characteristic prehistoric monuments in the landscape today, the numerous Bronze Age round barrows in Surrey are not always easy to spot on the ground, having undergone much erosion over the centuries. The best surviving barrows – which are usually

scheduled sites – are particularly concentrated in areas of heathland and often paired or in a small grouping, including at Thursley, Frensham, Horsell and Reigate.

In addition to the Society's own handling collections and teaching resources, local loans boxes are available from many of the county's museums, as well as Surrey History Centre.

Prehistoric and Bronze Age exhibits can be viewed at local museums including Chertsey, Guildford, Godalming, London and Kingston. Several barrows are well worth a visit, both in Surrey and elsewhere, and impressive reconstructions of domestic structures can be visited at Butser Ancient Farm.

c.1500-800BC New ceremonial and religious structures developed, such as cremation in fields and round-houses

c.1500-800BC Both the forms and quantities of metalwork increase, including leaf-shaped sword blades for slashing

c.1200-800BC Roundhouses become typical dwellings open settlements, the laying out of axes

c.1200-800BC Emergence of flat-grave cremation, including palstave axes with ornate metal weapons

c.1200-1200BC More sophisticated metal weapons grave goods and special funerary objects

c.1200-1200BC First industrial-scale copper mines are often with little leaders buried underneath barrows, ceremonial landscapes and elaborate barrows,

c.1200-1200BC Bronze is first made by mixing copper grave goods and special funerary objects

c.1200-1200BC Bronze culture and period of material for tools and tin and gradually replaces stone as the main

# Bronze Age 2500-800 BC Surrey

## Barrows in the landscape

Barrows are the most common prehistoric monument type and focus on individual – rather than communal – burial. There are many different classifications based on their profile (*far left*), and although the county lacks large barrow cemeteries as in other regions, many appear in nucleated – and often linear – clusters, as at the quadruple group at West End Common, Chobham (*right*).

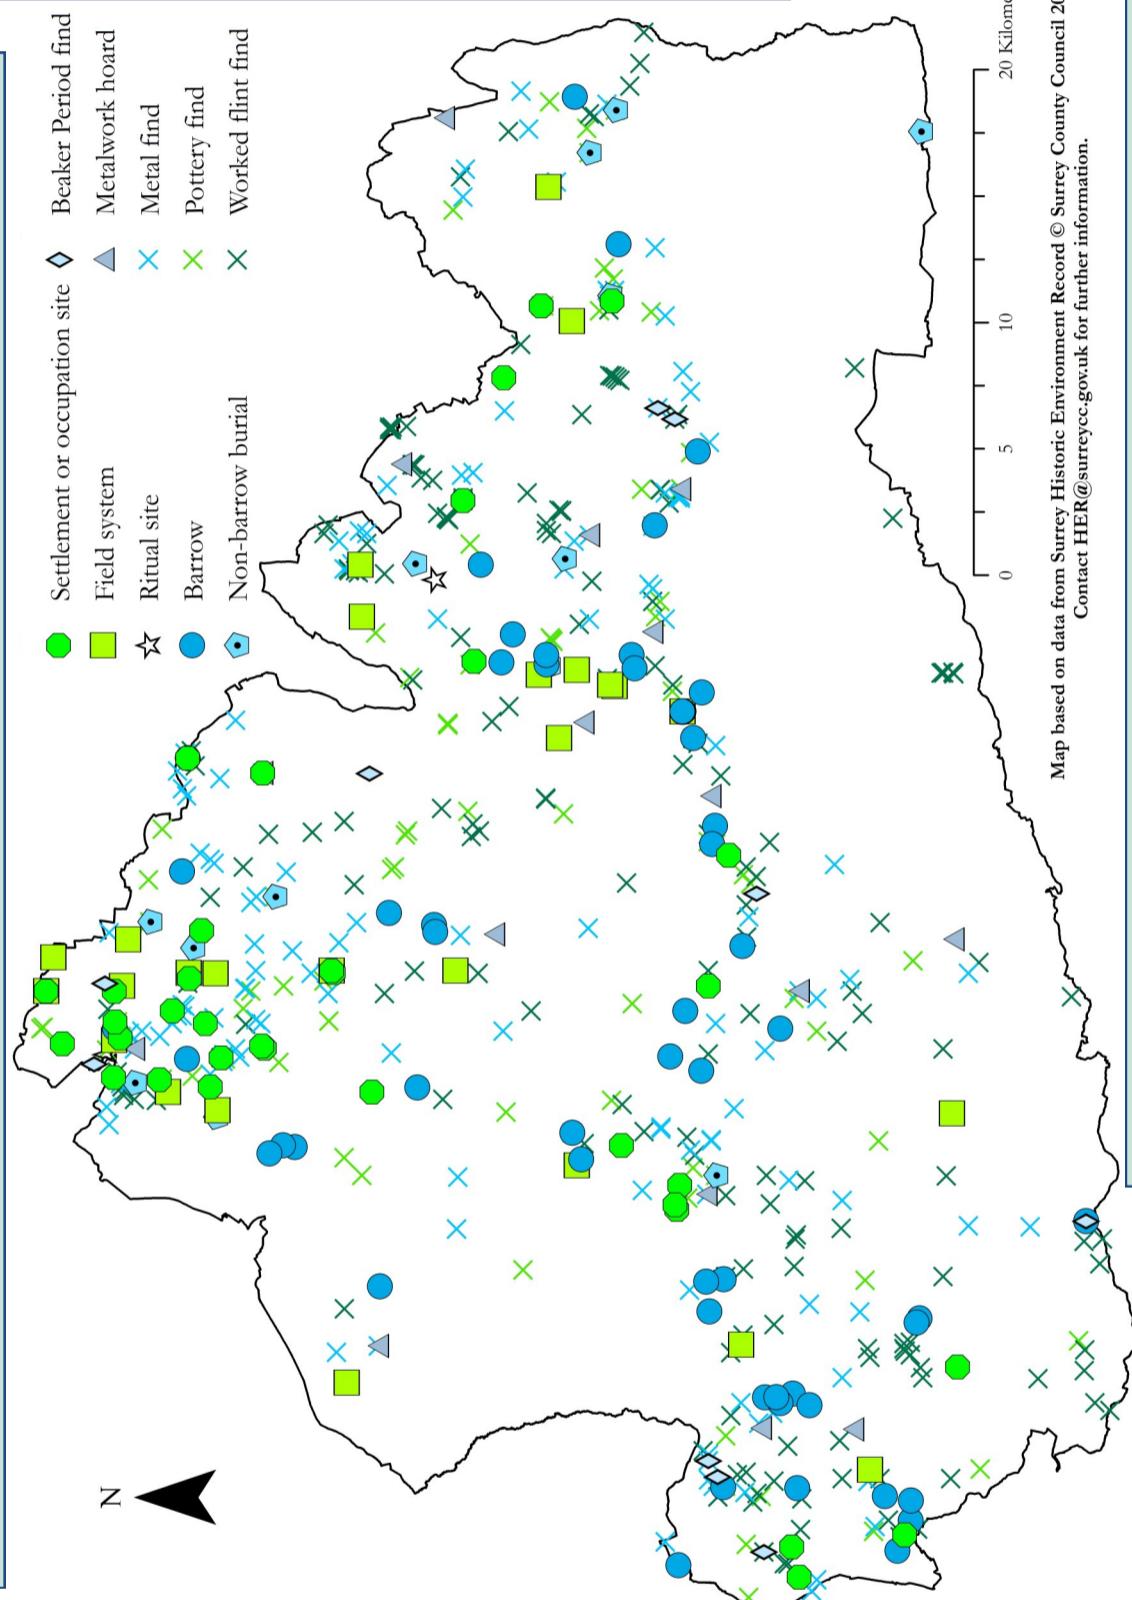

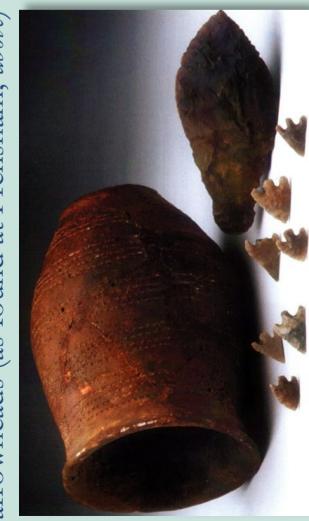

At one time, many Surrey barrows were deemed no more than natural sand dunes, however excavation at sites such as Thursley (*left*) have revealed their turf construction, along with features including pit burials. (Images: David Graham; © Environment Agency; Drawing: L V Grinsell)

### Early Bronze Age pottery and flint

Defining the Neolithic to Early Bronze Age transition – around 2500 BC – relies heavily on artefact types such as those associated with the ‘Beaker culture’, which had a particular concentration in the Kingston area.

Most of the Early Bronze Age pottery in Surrey are food vessels encountered in funerary contexts, whether collared and biconical urns or inverted-bell beaker vessels, such as that from Ham (*below*). Despite the invention of metallurgy, flint objects were still commonly in use, including knives, barbed and tanged arrowheads (as found at Frensham, *above*) and daggers (Barn Elms, Thames, *left*). ## Industry and agriculture

### Metal Detecting

If undertaken responsibly, detecting can make important contributions to archaeological knowledge. Detectortists are reminded that it is illegal to trespass – remember all land has an owner! – and to record finds with their local Finds Liaison Officer and the Portable Antiquities Scheme. For more on the Code of Practice, please see [www.finds.org.uk](http://www.finds.org.uk).

Postholes provide an indication of the size and layout of the roundhouses of the time, some – such as Petters Field – with imposing porches (as in the reconstruction from Buttersfield). Regional centres like Carshalton (*bottom*) were constructed in the Late Bronze Age to act as defensive points and meeting places, as well as display the occupants' means to order their construction. (Image: Buttersfield, Museum of London)

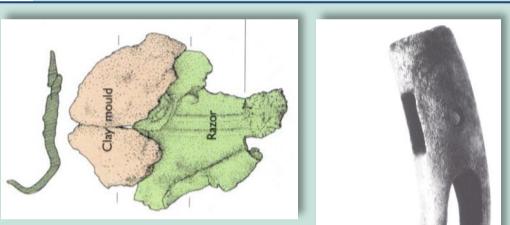

## Hoards and ritual deposition

An organised social structure is also indicated by the weaponry born by the military elite, in particular swords and shields such as from Chertsey (*below*), as well as regional differences in hoard types. In the south-west, small hoards with 2-5 objects – usually axes and spearheads, as with the Crooksbury or Hankley Common hoard (*below*) – seem to suggest personal armours or tool-kits. Elsewhere, hoards largely comprise obsolete copper ingots, as well as the substantial hoard of tools and weapons from Petters Field (*bottom*) that had been possibly hidden in a ditch by the local bronzesmith. (Photos: S A Oliver Charitable Trust © Chertsey Museum, Surrey County Archaeological Unit)
